Available Profiles

Two precision-cut profiles, designed to work seamlessly together for a fully finished deck.

Decking Board

The primary decking board for the main deck surface, featuring a mini pencil-round edge and continuous timber grain that flows seamlessly down each side. Installed with self-embedding screws, it delivers a clean, refined finish.

Bullnose Board

A bullnose board primarily used for stair treads, deck borders and step-downs. The smooth, curved profile removes sharp edges where they matter most, giving borders and transitions a finished, considered look.

Fasten with Innofix™

Concealed Fixing System

Every INNODECK® board is engineered to work seamlessly with Innofix™ screws.

Manufactured from 316 marine-grade stainless steel, the self-embedding screws drive directly into the board, allowing the Elastomer layer to close over the Torx head, leaving a fastener-free surface with superior long-term outdoor durability.

INNOdeck®
ENGINEERED TO PERFORM

The beauty of real timber.

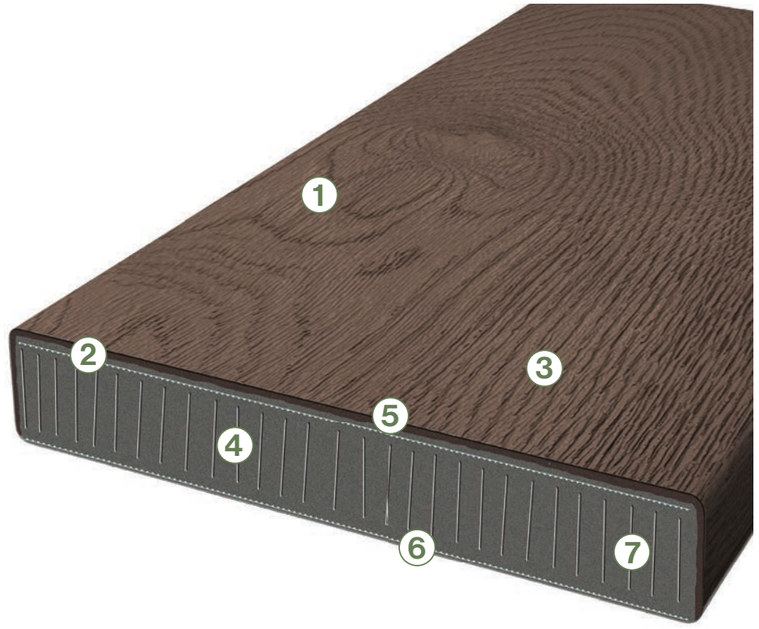

Next generation composite decking engineered for Australian conditions.

25 YEAR WARRANTY RESIDENTIAL

10 YEAR WARRANTY COMMERCIAL

masterwoodturning.com.au

Engineered from the inside out.

1. 3-Layer Advanced Coating

Delivering a P5 Slip Rating with a highly scratch-resistant surface that resists fading over the years to the natural eye backed by a 25 year warranty.

2. Chained Fibreglass Layer

Reinforced with cutting-edge chained fibreglass layers for unmatched structural strength.

3. Enjoy the Beauty of Real Timber

Timber grain extends along both board edges seamlessly connected with a mini pencil round edge for a natural realistic timber look.

4. Reinforced Structural Core

Provides unmatched strength for lasting structural integrity and superior dimensional stability, resulting in minimal expansion and contraction.

5. Engineered Performance

Engineered with a moulded rubber elastomer layer, the surface provides authentic timber aesthetics.

6. Fully Sealed Bottom

Improves handling while delivering a high quality finish.

7. Advanced PU Foam Core

Light weight by design, strong by nature.

Fade resistant for Australian conditions

Engineered for outdoors, INNODECK® boards feature advanced UV stabilisers to help resist fading and maintain colour over time. Built for harsh Australian conditions, your deck retains its appearance year after year.

Slip resistance for external applications

INNODECK® achieves a P5 slip rating, providing high slip resistance in wet and exposed conditions. Suitable for all commercial applications including pool surrounds, alfresco areas and high-traffic outdoor environments.

Innofix™ Self-Embedding Screws

INNODECK® boards are designed to work seamlessly with Innofix™ Screws. Manufactured from 316 marine-grade stainless steel, Innofix™ self-embedding screws drive into the board, and allow the rubber elastomer surface to close over the Torx head. Resulting in a seamless, fastener free finish, with superior long-term outdoor durability.

Engineered for dimensional stability

Every board is designed to maintain its form and spacing over the deck's life. Accelerated lifecycle testing during the manufacturing process ensures lasting durability. The result is a sturdy, reliable deck with minimal expansion and contraction, making installation predictable and long-term performance consistent.

Enhanced grain with minimal maintenance

Developed with a natural timber grain look, that extends along both edges. It's highly scratch resistant surface is designed to withstand daily wear while resisting fading without the need for ongoing maintenance. Backed by a 25-year warranty.

Precision installation system

Precision cut 3.6m boards with fully sealed flat bottom face and mini pencil round edges improves handling for a faster installation.

Seven oak-inspired tones. One natural aesthetic.

Each colourway in the INNODECK® range replicates the character and warmth of real timber. With grain extending seamlessly along both edges for a finish that's genuinely convincing.
